About Mojocare

Digital-first personal healthcare brand offering products and care plans across sexual, mental, weight management, detox, hair and skin verticals

Objective

Build the customer journey for stellar customer experience/higher NPS and build long-term trust.

Let's dive into each of the segments of the customer journey and look into actionable

Pre First Order: Awareness/Discovery/Consideration

1. Establish an easy-to-use conversation channel with your customers. WhatsApp can be a great option for two-way and quick response communication.

2. Lead Filled on the website or any other medium ➡ send them easy-to-consume information through WhatsApp. This can be easily automated with WhatsApp business API.
 - a. Depending upon which category they have selected, send them personalised information for that category in the WhatsApp message - Product Broucher for that category and Plan details etc
 - b. By the time a salesperson calls the customer; the user already has familiarity with the brands and product offering
 - c. Expose users to Discover/quick faq through Chatbots on Whatsapp.
 - d. [Link for something similar](#)
3. Now that users have opted in on Mojocare Whatsapp Number
4. Ask them to signup for a free 1-week care plan for that category they filled in the lead for
 - a. Free Care Plan is basically bite-sized Educational Information (Short Videos, Images and text) which will be sent once every day for the next 7 days (No Direct Selling); this duration can be increased depending upon how much time it takes for a user to convert
 - b. Reference from a brand focused on providing pregnancy care plans

Post Order: Nurturing, Order Updates, Trust building

1. When an order is placed, communicate the order confirmation information through WhatsApp, and inform them that they can reply back to the same WhatsApp number for any queries in the future. This can be easily automated with WhatsApp business API.
 - a. An assurance that your brand is just a WhatsApp message away, is a great way of cementing the trust between the customer and your brand.
2. Once an order is placed, till the order is received customers are most anxious about the product delivery. Ease the anxiousness by communicating about the shipping information and order tracking URL via an automated WhatsApp message.
3. Once the order is delivered, send a "How to use" demo video using an automated WhatsApp message and encourage questions from the customer in case they need anything from you.
 - a. Convey that you genuinely care for your customers.

Post Delivery: Feedback, Upsell/cross-sell/Loyalty Program/Reviews

1. Ask for feedback and understand the customer's expectations.
2. If the product is good and you ensure that they had a delightful experience, it's time to RECOMMEND, the following logical product for them to purchase. This can also be automated using WhatsApp message sequences
 - a. Approach with the mindset of solving the next logical problem of the customer and not by selling the following product for your business.
3. If the recommendations are relevant to the customers and they express intent by checking and interacting with the WhatsApp communication you have sent, you can confidently go ahead and ask for the sale. WhatsApp conversational flows can be designed for the same easily.
4. Send a message thanking customers for the repeat purchase and confidently ask for Referrals.
 - a. Send them a quick message about the product that they can easily forward to their friends and family on WhatsApp.
 - b. Introduce your Referral Program
5. Repeat all the steps for every single order.

How will this be implemented:

1. Understand the current systems and how data is Flowing.
2. Decide on WhatsApp Marketing software if not using one already, Or evaluate the feasibility with the existing one.
3. Design the Project, assign stakeholders, fix timelines and define Success metrics. Below Team below be involved.
 - a. Product Managers/Marketers (Ownership)
 - i. Content & Design
 - ii. Developers

Important Considerations:

1. Ensuring all the data points are being tied back to the Central CRM
2. Ensuring the Sales team have activity logs on their Lead Square for better context. (In an ideal scenario, there should not be a need for a sales team after 1st Purchase, we should aim for it)

3. If Configuring a new WhatsApp marketing Tool, easy to use drag and drop builder for creating chatbots is a must, Developer hours create delays in implementation, and Product Managers/Marketers should be able to build chatbots and flows as per the need.
4. Keep storing the respective segments of data from the discovery till purchase, which can be passed back to respective channels for running data-driven Campaigns campaigns

Tools:

Advocacy for clean data and proper integrations across tools and CRM

Marketing Automation: Clevertap/WebEngage or Any other WhatsApp marketing software

Sales: LeadSquare

Support: Freskdesk and Similar

Closing Thoughts

Customers are more likely to buy from a brand which is easy to talk to and educates them about their pain points.

All user acquisition campaigns have now become investments to buy data, and WhatsApp is one of the vital ways to keep the same user engaged (More than 90% open rate, email has avg 5-10% open rates) without worrying about pixelated data for remarketing and retention.

Own First Party; Educate, Nurture, Provide Updates, Reviews, Customer Support, Retargeting and Retention on WhatsApp. And Build Trust and Loyalty of the customer.
